Poodles

Stud Service Pricing Breakdown

Stud Service Fee

This Fee is different for each stud listed on our website and is dependent on how desirable their genetics may be for other breeding programs. Please be sure to check each stud's listing for the most accurate pricing.

Brucellosis Testing

For our natural stud services, we require that your female have a current negative brucellosis blood test within the last 30 days. This is a simple blood draw at your vet and does take a couple of days for results, so please plan accordingly.

Reservation Fees Apply

To secure potential calendar dates for your stud service, a \$100 non-refundable reservation fee must be placed, which amount will go towards your total due for services.

A.I. Additional Fee

We require a \$200 additional fee to cover additional costs that are spent in providing artificial insemination. This fee covers the following:

- Fresh-Chilled Semen Transport Kit
- Long Term Extender
- Semen Collection Supplies
- Semen Analysis

The A.I. additional fee does NOT include shipping costs, which will vary according to location and time of delivery.

Progesterone Testing

We do require you to do progesterone testing with your vet in order to carefully time the insemination & guarantee pregnancy. This is a blood draw done at the vet to time when your girl is ovulating. You'll begin progesterone testing when her discharge is very light to non-existent near the end of her bleeding cycle. See chart below for guidance and action to take given the progesterone numbers she tests at.

This is a chart provided by IDEXX which we go by for breeding. Many breedings are done far too early and result in missed pregnancies. We would like to minimize misses based on timing.

You can usually wait to do the first progesterone number on the 8th day. Do not stop testing until you've reached a number over 5.

Below 1.0 ng/ml - no ovarian activity -
ACTION: Test every 3 or 4 days

1.0 to 2.0 ng/ml - rise indicates active ovary -
ACTION: test in 2 to 3 days

2 to 4.9 ng/ml - active ovary - ACTION - Test every 24 hours until you determine 5.0

5.0 Ovulation!

5 to 6 ng/ml - ACTION - Breed in 2 to 3 days

6 to 11 ng/ml - ACTION - BREED in 1 to 2 days

11 to 19 ng/ml - ACTION - BREED TODAY!

Over 19 ng/ml - BREED IMMEDIATELY if vaginal smear is OK and female is still receptive. This is considered LATE, if you have to ship semen. Hope for the best!
